

## Clinical Anatomy of the Eye

Clinical Anatomy of the Eye was written to provide the ophthalmologist and optometrist with the basic knowledge of anatomy necessary for practising ophthalmology. The surface anatomy and surface landmarks of the orbital region have been stressed through a series of specially commissioned illustrations. Photographs of living subjects have been added to assist this study. Other illustrations include normal radiographs, CT scans, NMRs and sonograms. The practical application of anatomical facts to ophthalmology are emphasized in the form of clinical notes. Clinical problems requiring anatomical knowledge for their solution are presented at the end of each chapter.
