

The Memory Launderer

As law enforcement debuts what they call the finish line of lie detector technology - a device that can scan a suspects memories to see what theyve done - Natalie Coleman and her crew of professional thieves figure theyve been forced into an early retirement.

Then Natalie is approached by a rogue scientist, who claims she can wipe the crews next heist from their memories, making it impossible for them to incriminate themselves. It sounds like the perfect crime - until some memories prove harder to erase than expected.
