

Message from Tomorrow: A Near Future Time Travel, Science Fiction Novella

Andre Manus sat in the dark basement of his gothic-style mansion at the desk where hed spent the last 3 years working, sweating and making history. Hed made an evolutionary leap in computing, discovering a way to process information instantaneously no matter how large or complex through an alternate space-time. By all rights Andre should be proud. The world was his. He owned the key to it all. Offers had poured in and virtually overnight he was mega-rich. Yet it was all overshadowed by one stupid mistake that had cost him everything. His daughter, Allie had just been killed in an auto accident. His wife, Krissy had collapsed with grief and kicked him out of her life. His Board of Directors barred him from his own company and filed charges with the FBI. There was only one thing he could do with his life. End it. His 9mm pistol had one bullet in the chamber. He held it to his head, his finger squeezing the trigger . . . But he couldnt do it. He was too much of a coward. Too bad he couldnt program his computer to pull the trigger. Or could he? Computers were his thing. It would be poetic justice if his computer were his weapon of choice. And hed just developed a method where he could do it. His plan was simple. Access space-time and send a message into the past. He would warn himself away from this future and essentially destroy his current life by eliminating it from the timeline. He would be committing suicide by computer. But what warning could he give himself? He couldnt write it down because it was a neural interface. He had to implant the message into the brain of his past self. Would he recognize it? Then Andre stopped and considered the ramifications. Hed read the scientific literature, the alternate timeline theories and watched the movies. If he changed his past it would eliminate his present. Peoples lives would be affected irreparably though they

wouldnt know it. Did he have the right to alter everyone elses life for the sake of his own? Then he thought of Allie in the car accident dying alone. He thought of Krissy lying in a hospital bed with her heart broken and her life shattered. Yes. Hed do it. Andre sat the headgear on his head and accessed the computer program. Everything was ready but the message. Then he remembered Allie and the last words shed said to him, and knew what his message had to be. He reached out and pushed Enter and thought the word, Go. Convulsions shook him and his mind started flickering in and out of space-time.

Through force of will he gathered all his mental and emotional energy, and thought the message. He felt himself at the other end of time convulsing in this same chair, three years and six months earlier. Did he (I) get it? Enjoy this 22,000 word near future time travel, science fiction novella.
